

BHRT Fused Pellet Implants

Improved Process & Packaging

Improving on 25+ years of experience compounding BHRT Pellet Implants! College Pharmacy has been compounding BHRT Fused Pellet Implants since 1988! We were one of the first compounding pharmacies to work with healthcare practitioners in the mid-1980s that wanted their patients to have access to this dosage form that had been popular into the 1970s. Unlike earlier versions, our fused pellet implants were created using more advanced compounding technology and BHRT formulations. Unstable pellets that crack or crumble can have a negative impact on the quality of treatment. The entire compounding process is an important “ingredient” in creating a BHRT pellet implant.

College Pharmacy’s convenient flip-top fused pellet vials are easy-to-use, color-coded by ingredient, and meet our strict sterility and quality standards.

Improved Color-Coded Sterile Packaging: We pride ourselves on our sterile compounding capabilities and want to ensure that our packaging reflects the most modern packaging standards. Our color-coded packaging adheres to College Pharmacy’s strict company wide sterility standards. All vials containing BHRT Fused Pellet Implants are color-coded by hormone for additional safety and convenience. Select pellet formulations and strengths may also have a pellet protection “sleeve” in the vial to help prevent breakage during shipping.

Improved Order Processing Times & Product Sterility with E-Beam Technology! College Pharmacy has adopted e-beam technology to ensure our pellets meet our strict sterility standards, while also allowing us to process orders more efficiently without delays in the traditional sterility testing process.

Estradiol	Price
6mg	\$17.41
8.5mg	\$17.41
10mg	\$17.41
12.5mg	\$17.41
15mg	\$17.41
18mg	\$17.41
20mg	\$17.41
25mg	\$17.41
37.5mg	\$17.41
50mg	\$26.02
75mg	\$37.75
100mg	\$49.46
